TECHNICAL SKILLS

Desktop & Cross-Platform	Electron.js, electron-builder, electron-updater (auto-update), Node.js, main/renderer IPC, background processes, Windows / macOS / Linux packaging, WinForms
Languages	TypeScript, JavaScript, C#, Python, C, C++
Front-End	React, Redux, Angular, Bootstrap
Backend & APIs	Node.js (NestJS), ASP.NET Core, REST, Entity Framework Core, LINQ
Architectures/Patterns	Event-Driven, Client-Server, Microservices, CQRS, Domain Driven Design, Serverless
Databases	SQLite, MSSQL (Proficient), MongoDB, MySQL, DynamoDB, Azure Cosmos DB
Cloud Platforms	AWS (IAM, EC2, Lambda, S3, SNS, SQS), Azure (VM, AD, DevOps, App Services)
DevOps & Tools	Git, GitHub Releases, Docker, Azure DevOps, TFS, Jenkins, IIS, Jira
Testing	NUnit, xUnit
AI Tools	Claude Code, GitHub Copilot, AI Prompt Engineering, Google Gemini AI
Agile Methodologies	Scrum, Kanban

PROFESSIONAL SUMMARY

Software engineer with 6+ years of production experience, focused on cross-platform desktop applications built with Electron.js, TypeScript and Node.js. Author of LithiumGit, a publicly released Electron desktop Git client that ships installers and differential auto-updates to Windows, macOS (x64 and arm64) and Linux from a single codebase. Previously built a real-time activity-monitoring agent that captured OS-level user interaction signals across Windows, macOS and Linux to generate workforce productivity analytics. Backed by deep experience in distributed backend systems, data synchronization and API design across enterprise .NET and Node.js platforms on AWS and Azure.

SELECTED DESKTOP ENGINEERING

LithiumGit - Author & Developer - lithiumgit.com github.com/TulshiDas39/LithiumGit	2021 - Present
- Designed and built a cross-platform desktop Git client in Electron.js with a TypeScript/React renderer, delivering consistent behavior on Windows, macOS and Linux from one codebase. - Built and own the complete release pipeline: electron-builder packaging to a Windows installer, .dmg for macOS arm64 and x64, and .deb / .ApplImage for Linux, with electron-updater differential (blockmap) auto-updates across published release channels. - Implemented an interactive commit-graph view that renders large repository histories responsively, with in-context merge, rebase, cherry-pick and branch operations. - Built the client to drive the user's existing local Git installation and work against any remote - GitHub, GitLab, Bitbucket, Gerrit - with no account, sign-in or backend dependency. - Tuned the main/renderer process boundary, IPC and memory footprint so the UI stays responsive while long-running Git operations execute in the background.	
Intellifriend - Real-time activity monitoring agent - Brainstation-23	2019
- Built a real-time activity monitoring system that tracked user activity on Windows, Linux and macOS devices and analyzed the captured data to produce comprehensive employee productivity reporting. - Worked on the Electron.js desktop client alongside senior engineers, covering background execution and system-level capture of user interaction signals.	
BIS - Bridge Inspection System - Windows desktop application - BJIT	2023
Windows desktop application running on field engineers' tablets, managing bridge fault records with captured images and detailed inspection data.	

WORK EXPERIENCE

Principal Software Engineer | BJIT (Dhaka, Bangladesh)

September 2023 - Present

TypeScript, React, WinForms desktop, C#, ASP.NET Core, Entity Framework, MSSQL, Azure, Docker

- Building BIS, a Windows desktop application used on engineers' tablets in the field for bridge fault inspection and image capture.
- Leading development of FEIM, an asset management system letting maintainers handle asset physical state, acquisition information, pricing, repair, and maintenance workflow configuration for engineers.
- Customizing and maintaining [MyHome](#), a property portal covering thousands of rental properties, parking and amenities booking, with custom service management for residents and property administrators.
- Maintaining IMPORTs, an enterprise property and project management system with comprehensive CRUD operations, Excel import processing and role-based access control across projects, properties, tenants, contracts and parking.
- Mentoring developers, designing scalable architecture patterns, improving system reliability and supporting global deployments.

Software Engineer | KAZ Software (Dhaka, Bangladesh)

January 2020 - August 2023

C#, ASP.NET Core, TypeScript, Angular, React, Node.js, MSSQL, NoSQL, AWS

- Designed and developed scalable web applications deployed on AWS and Azure, cutting operational costs by 25% and improving system reliability.
- Optimized APIs serving millions of users with load-balanced API gateways, reducing downtime and automating deployments.
- Modernized legacy software projects, improving application performance with ASP.NET Core and Docker.
- Delivered features across four client platforms: [Reganalytics](#) (global trade compliance with real-time regulatory updates), [WebEvv](#) (cloud EVV platform with real-time visit tracking), [Devensoft](#) (merger and acquisition platform), and [P1ston](#) (supply-chain ERP with automated purchase-order workflows).
- Managed and mentored subordinates and reviewed code within Agile practices.

Internship Trainee | Brainstation-23 (Dhaka, Bangladesh)

January 2019 - June 2019

JavaScript, Electron.js, AngularJs, C#

- Built and maintained features for cross-platform desktop and web applications, working primarily in Electron.js and JavaScript.
- Collaborated with senior engineers on scalable real-time activity monitoring for computer devices (Intellifriend, above).

EDUCATION

Bachelor of Science in Software Engineering

2015 - 2019

[University of Dhaka](#) | Dhaka, Bangladesh

CERTIFICATION, PUBLICATION & ACHIEVEMENT

- **AWS Certified Cloud Practitioner** - [Certificate](#)
- **Conference Paper:** Analyzing Golang Projects Architecture Using Code Metrics and Code Smell, 26 June 2021 - [Paper](#)
- **Best Performer Award**, BJIT, FY 2024-25 - [Certificate](#)

ADDITIONAL DETAILS

- **Availability:** Full-time, fully remote; able to overlap with US and European working hours.
- **Languages:** Bengali (native), English (professional working proficiency).
